English: B2 (Professional working proficiency) •

Spanish: Native

Professional Summary

Backend Developer and Data Analyst with strong hands-on experience in real-time data workflows (Sportradar), ETL pipelines, Python analytics tools, .NET backend architecture, SQL databases, Dockerized deployments, and homelab infrastructure.

Skilled in clean code practices, REST API design, automation, data validation, and performance-oriented workflows. Fast learner, autonomous, detail-driven, and contractor-ready.

Core Technical Skills

Backend Development: C#, ASP.NET Core, APIs, layered architecture, repository pattern, SQL Server, validation flows, error handling, rate limiting, unit testing.

Data Engineering / BI: Python, Pandas, NumPy, ETL pipelines, data cleaning, KPI modelling, Streamlit dashboards, SQLite, PostgreSQL, Power BI (basic), anomaly detection, logging frameworks.

DevOps / Homelab: Docker, Docker Compose, Linux (Ubuntu/Manjaro), Nginx basics, container orchestration fundamentals, virtual machines, self-hosted LLMs, local AI models training, local monitoring, NAS planning.

Programming Languages: Python, C#, Java, SQL, HTML/CSS/JavaScript.

Web Development: Responsive Web Design (FCC certified), HTML/CSS, JS basics, UI/UX fundamentals.

Tools & Other: Git, GitHub, VSCode, SQLite Browser, debugging, documentation, async workflows, RunPods.

Experience

Sports Data Analyst — Sportradar

Jul 2025 – Sep 2025

- Processed and validated high-frequency real-time sports data streams for automated betting engines.
- Maintained live data accuracy above 98% through anomaly detection and rapid manual corrections.
- Resolved critical data mismatches within seconds during high-pressure match environments.
- Collaborated with distributed international teams under strict SLAs.
- Strengthened analytical precision, data quality mindset, and operational resilience.

Freelance / Personal Engineering Work

2023 – Present

- Built multiple backend services, a BI tools, and automation scripts showcased at ovacode.dev.
- Implemented homelab workflows using Docker, Linux, and lightweight monitoring setups.

Major Projects

Odds BI Platform — ETL, KPIs & Streamlit Dashboard

- End-to-end BI pipeline: raw CSV ingestion → cleaning → SQLite modelling → KPI computation.
- Implemented missing value treatment, volatility scoring, anomaly detection and transformation logs.

- Developed an interactive Streamlit dashboard with KPI cards, filters and trend analysis.
- Focused on production-minded structure: modular ETL, reproducibility, clarity and maintainability.

Backend Web Apps — ASP.NET Core

- Built Web Apps with clean architecture, controllers, services, repositories and DTO validation.
- Implemented SQL Server persistence, migrations, constraints, indexing and query optimization basics.
- Added authentication (JWT), global exception handling and structured error responses.
- Developed unit tests following direct invocation pattern (Assert.AreEqual, Assert.Throws).

Homelab Infrastructure — Docker + Linux

- Deployed .NET, APIs, Python scripts and BI services in Docker containers.
- Configured Docker Compose for multi-service setups (APIs + DB + monitoring).
- Built VMs (Windows, Ubuntu, TrueNAS) for isolated development, backend testing and ETL execution.
- Designed NAS architecture with multi-disk expansion.

AI Tools & Automation — “Aionis”

- Created Python-based AI assistants for dataset summarization, vision task, and code automation.
- Integrated local LLMs for contextual reasoning and file parsing tasks.
- Automated repetitive data workflows using lightweight Python pipelines.

Portfolio Website — ovacode.dev

- Fully responsive personal dev hub showcasing backend, BI, data and AI projects.
- Designed custom UI layout, routing logic and animated components in HTML/CSS/JS.

Additional Technical Experience

SQL Skills: Joins, aggregations, constraints, indexing basics, schema design, migrations, normalization, transaction concepts.

Backend Patterns: Service layer, repository, DTO mapping, dependency injection, modular architecture, environment configs.

Testing Competencies: Assert-based TDD style, boundary testing, exception testing, constructor validation, data setup isolation.

Data Quality Mindset: Outlier detection, missing value strategies, validation scripts, reference comparisons, reproducibility.

Homelab Engineering: APIs hosted locally, reverse proxy experiments, self-contained services, local observability basics.

Education

Bachelor of Computer Systems — ORT Uruguay (2.5 years completed; software engineering, algorithms, networks, databases)

Computer System Engineering — UDELAR (0.5 years completed; software engineering, algorithms)

Certifications

- Responsive Web Design — freeCodeCamp (300h, 2023)
- Universidad Java – De Cero a Experto — Udemy (155h, 2025)
- Python Bootcamp: Zero to Hero — Udemy (20h, 2025)
- Software Engineer Certification — HackerRank (2025)
